ABSTRACT: Technology-based foreign language teaching has provided many effective strategies in learning process. the use of it technology in teaching shows the way to a good command of target language with proficiency computer learners stand a better chance of improving their foreign language skills if learning is strengthened with technology, therefore, it technology-aided learning environment is a key factor that motivates the learners to accomplish better carrier.

KEY WORDS: information technology, foreign language learning, achievement, flexible learning, consolidation.

INTRODUCTION

As information technologies evolve and advance over time, use of information technology in classroom has increased in social groups. There is a wide spread belief that technology based instruction can contribute greatly to the quality of teaching and learning English. Today's language teachers need to learn how to take advantage of the information technology and how to integrate it into their teaching skills. There are a host of effective ways to learn English, students might feel very excited about language learning and are motivated to practice more, using devices which they can practise a language through features such as communicative competence, independent work and training cooperation[6.2].

Main part

When learning a new language, we should consider why you need or want to learn the language and how you plan to use it. Some goals may take a few month to reach; others a few years. For use in foreign language lessons, a wide range of computer programs are currently offered;

Educational programs – to acquire certain knowledge, skills and habits;

Training programs- to consolidate knowledge and skills;

Control programs- to monitor the quality of knowledge and correct it; Game programs- for intellectual development[13.3].

The use of information technologies also facilitates the implementation of group work; allows planning creative activity, active and purposeful communication (within the group and with the outside world). As a matter of fact, when teachers use technology in class they should know students' current language skills and needs. Not only information technologies (IT) are powerful tools but also Internet is getting more common for people. In the last 10years technology (internet, smartphones, computers etc.) has been used in all parts of lives.

“In my experience, technology has broadened the spectrum of interaction while empowering the students' learning process by providing better opportunities for language usage”.

Conclusion

Traditional methods are considered useful for language learners however (IT) technology-based instructions highly contribute to teaching and learning process. Technology based instruction effectively leads to accomplishment. It has been argued that motivation that occurs through integration of technology into language teaching and learning process encourages learners to achieve better degree.
